70. (New) A method for accessing an asynchronous DRAM, comprising:  
switching between a burst and a pipelined EDO mode in the absence of a WCR cycle;  
selecting an external address data path;  
instructing the asynchronous DRAM a desired memory operation; and  
performing the desired memory operation until terminated.

71. (New) The method of claim 70, wherein selecting includes selecting the external address data path from a buffer when the act of switching switches to the burst EDO mode.

72. (New) The method of claim 70, wherein instructing includes instructing the asynchronous DRAM the desired memory operation, wherein the desired memory operation is selected from a group consisting of a read operation and a write operation.

73. (New) The method of claim 70, wherein performing includes obtaining an external column address so as to perform the desired memory operation, and wherein performing includes iterating the act of obtaining the external column address until terminated.
